

BARD & BRAZIER

RAILS & CONSOLES

2019

BARD & BRAZIER

OUR AIM IS SIMPLE.
TO PRODUCE THE BEST TOWEL WARMERS
IN THE WORLD

Blue Riband manufacturing. We buy all of our brass from the best mill in Germany. We use dezinc brass therefore less chance of oxidization. We only use silver solder, not soft solder, which is five times more expensive, much harder to work with, stronger, provides cleaner joints and five times more peace of mind.

Innovation and engineering skills. Patents such as those used in the invention of the hidden valve for the D-rail sets us apart from our peers. We believe we set the standard that very few companies can match, whilst remaining true to classic original design. The Criterion is a discovery unearthed in an old stately manor house in Shropshire. If you look closely you will find that we have diligently kept to all the angles and structured lines, a feature of the Deco period.

Quality, quality, quality, the three things we are truly fastidious about. A visit to our factory will show you why we are known for quality, our team of 30 bold women and men make all the rails themselves. From CNC machines to hot blazing torches everything is in place to substantiate our belief that we make the best towel warmers in the world.

You are in safe hands because you can talk to the people who actually make your rail right here in Britain. If there ever was a problem we can resolve it without having to rely on factories outside of these shores.

CHOOSING THE RIGHT RAIL

A GUIDE TO THE OPTIONS AVAILABLE

RAIL FUEL TYPE	HYDRONIC	SEALED ELECTRIC
		
THIS CHART SHOWS THE RAIL FUEL OPTIONS WE PROVIDE AND WHICH RANGES ARE AVAILABLE FOR EACH FUEL OPTION.	Hydronic models use hot water plumbing to produce heat by running hot water through the towel warmer. This can be done one of two ways: by connecting to a hot water heater (open system) or to a heating system (closed system).	Sealed electric towel warmers contain an electric element that heats liquid within the unit. The towel warmers are normally hardwired into a spur socket outside the bathroom, working independently from your heating system and hot water.

ST LEGER	 PAGE 44	 PAGE 44

DUAL FUEL

Dual fuel towel rails can work one of two ways. Either through using the house heating system as per the hydronic rails, or through the electricity supply using an internal element. This is normally hardwired into a spur socket outside the bathroom.

PAGE 44

FLOATING HYDRONIC

Floating hydronic models use the hot water to produce heat by running hot water through the towel warmer. This can be done one of two ways: by connecting to the hot water (open system) or to a radiator heating (closed system).

PAGE 16

PAGE 18

PAGE 20

FLOATING ELECTRIC

Floating low energy high heat electric towel warmers are wired outside the bathroom and require no water. We recommend that they are wired to a timer for optimum use. These rails can be used in any bathroom or cloakroom, in hotels, private homes, stately homes or palaces.

E & OE

QUALITY, QUALITY, QUALITY

All joints are silver soldered for maximum strength

Each rail is individually hand made

Ball joints are of a quality stamped construction, not cast, using bespoke tooling

The ball joints, wall plates and pipes are hand polished prior to assembling to ensure a perfect finish once assembled

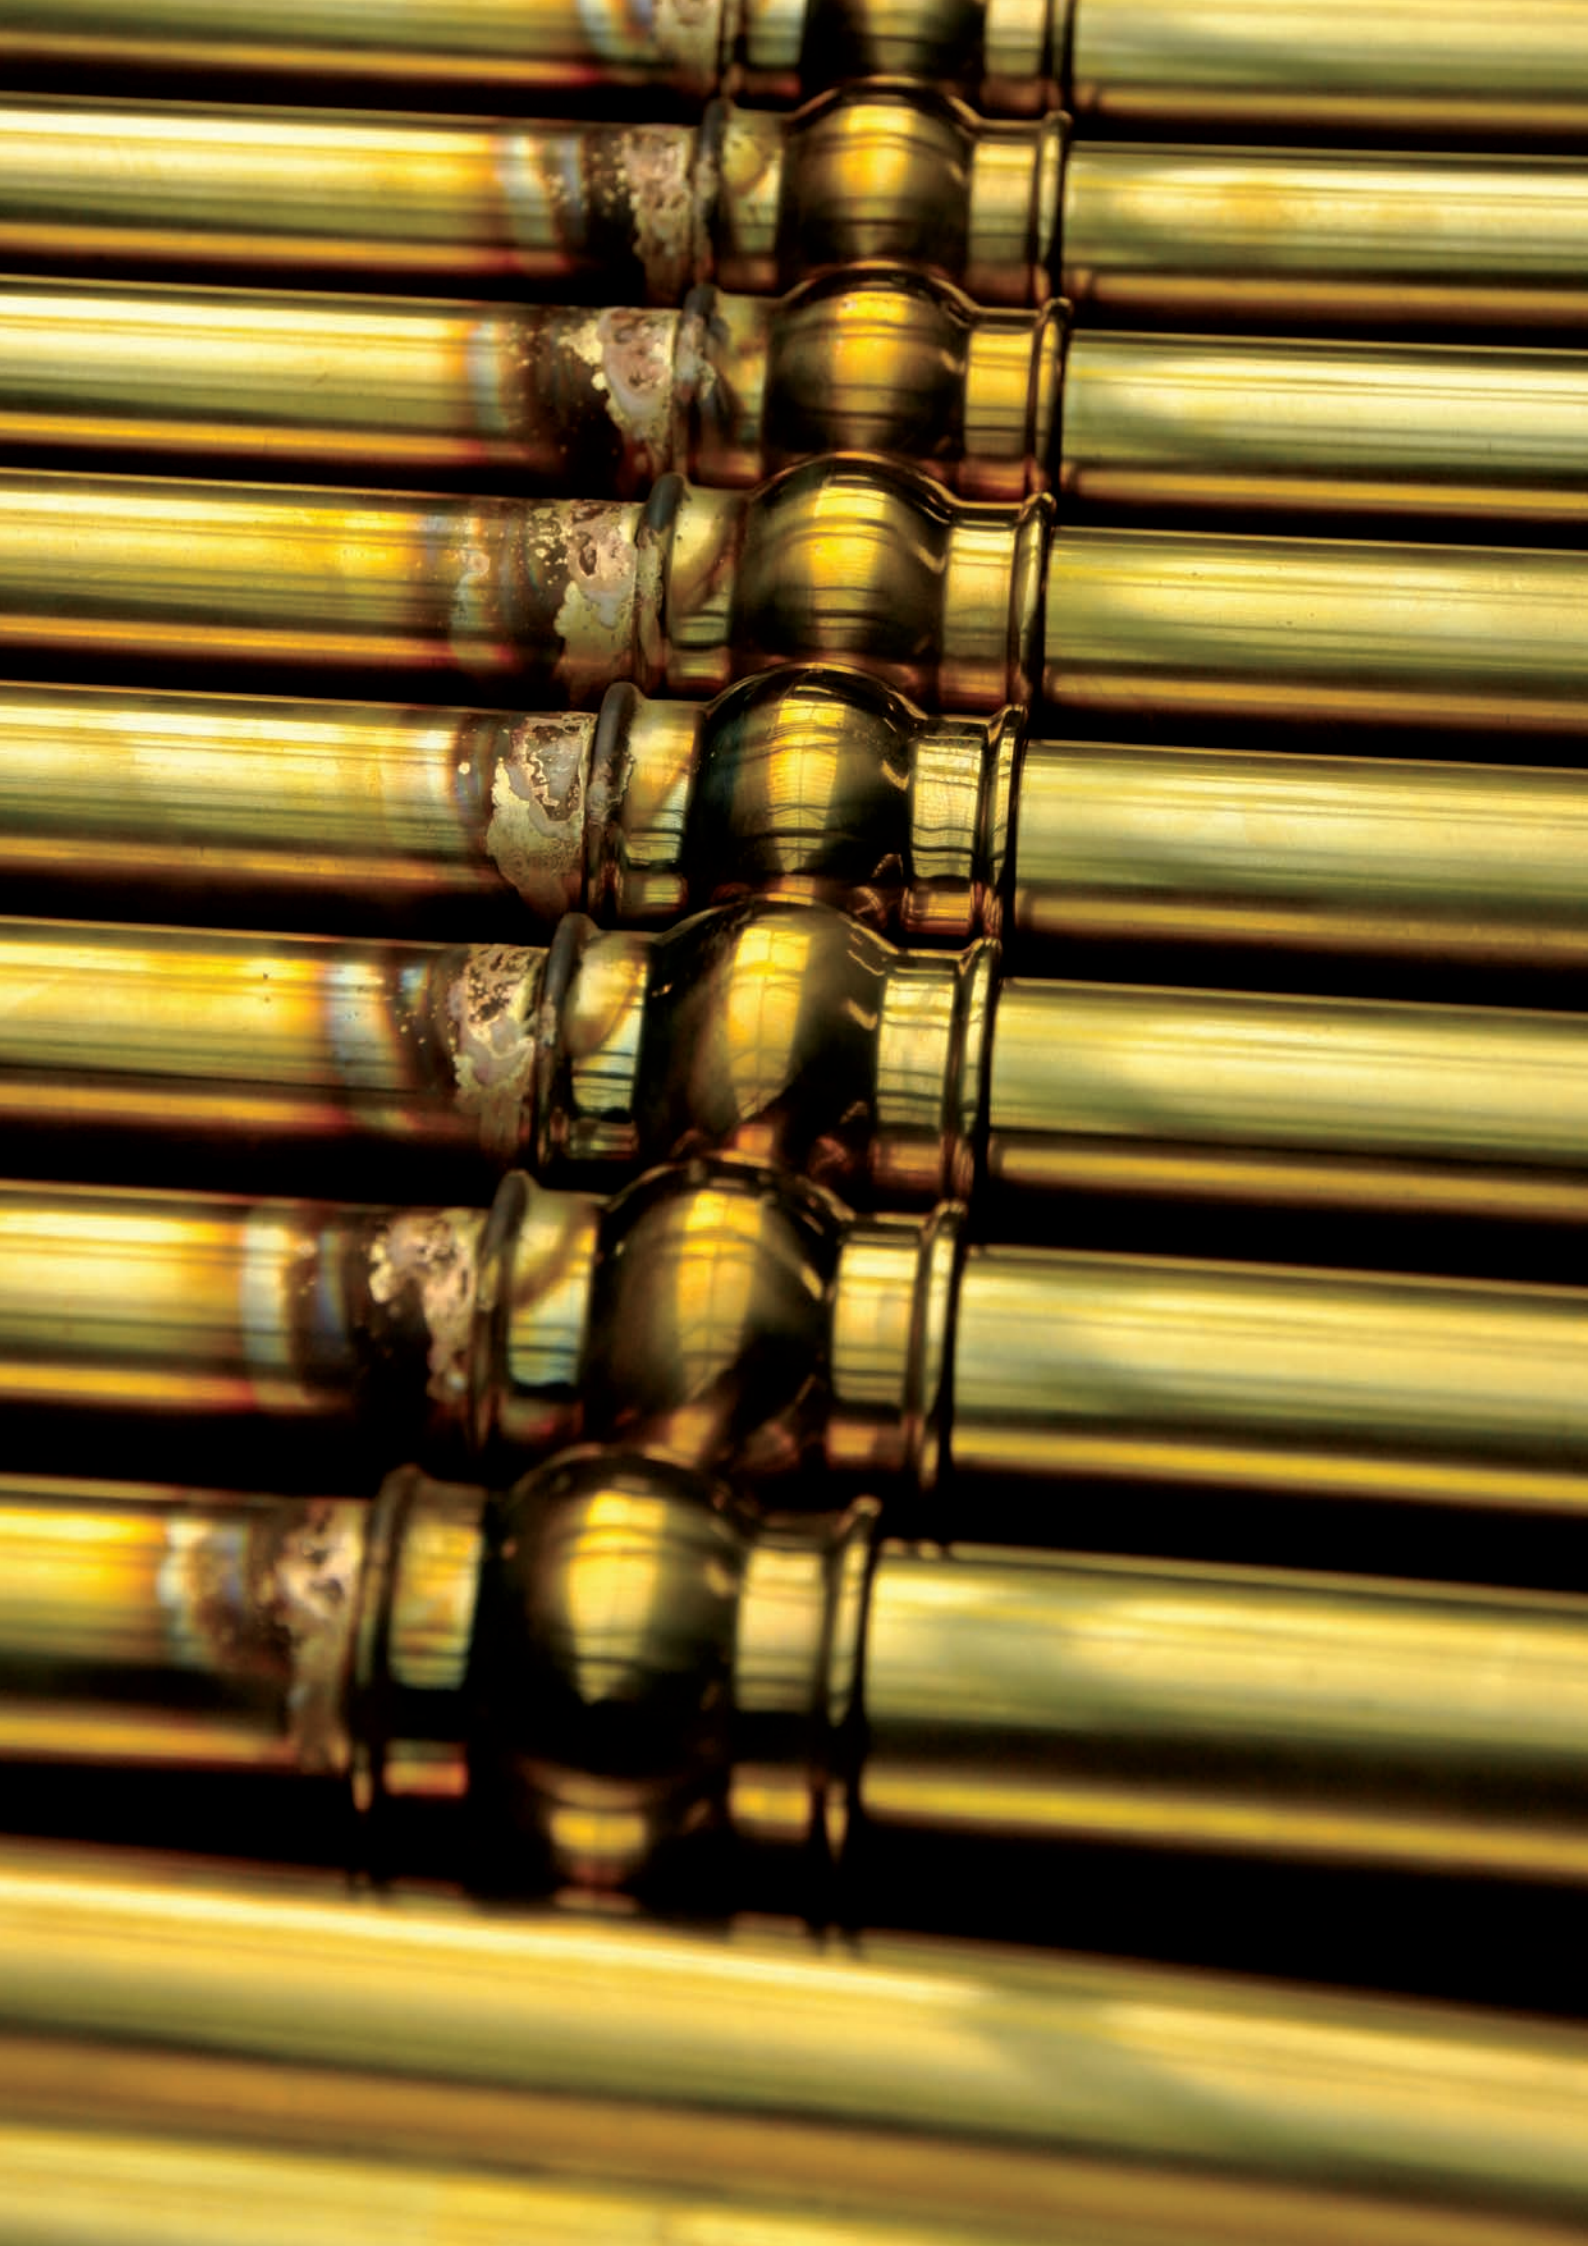

All our towel warmers are constructed from high quality milled brass

Each product has to pass a pressure test at 6bar after construction, after polishing and finally before packing
